Homepage	www.angelkorea.co.kr

Guardian Angel of Preventive Dentistry, a manufacturer of professional oral hygiene products for the dental clinic is a company that leads a healthy oral care through consumer-oriented proper oral hygiene and use of professional oral care products.

It is to prevent healthy tooth by increasing the use of secondary oral products including interdental toothbrush, dental floss through manufacturing and distribution of professional products rather than targeting the market for oral care products generalized.

We strive to make oral products to suit individuals by producing the products required in between hospitals and consumers and improving the quality.

Soft toothbrush bristles

: adopts the yarn of DuPont and makes a mock cross-section round by repeating the polishing process to effectively remove plaque.

Compact toothbrush head

: Designed to cover the two teeth in molar area and facilitate access to the inside of molars with a 2.3cm toothbrush head.

Toothbrush handle with comfortable grip

: Designed to grip easily and conveniently as a whole while maintaining a straight line and granting a partial curve functionally.

For Angel Name-brush , the user name can be listed on the front of the toothbrush, so it is easily distinguishable from other toothbrushes.

Product Information

Toothpaste-coated toothbrush

It is the easiest toothbrush in the world you can use immediately after opening without the need for putting toothpaste on a toothbrush.

Patent no.: 10-1164978

Design trademark no.: 30-0595383

Economy

No toothpaste is wasted.

You can save water.

Good idea

Reusable

Hygiene

The laziest toothbrush in the world

The easiest toothbrush in the world you can use immediately after opening without the need for putting toothpaste on a toothbrush.

Toothbrush safe from germs

Safe from germs through washing before coating toothpaste, and 2 times UV disinfection and drying process

High-end toothbrush with different feeling

Unlike other disposable toothbrushes, the product can be used multiple times using different high-end toothbrush bristles and toothbrushes.

Healthy toothbrush without abrasives

The coating composition of toothpastes does not use abrasives, so you can use it safely.

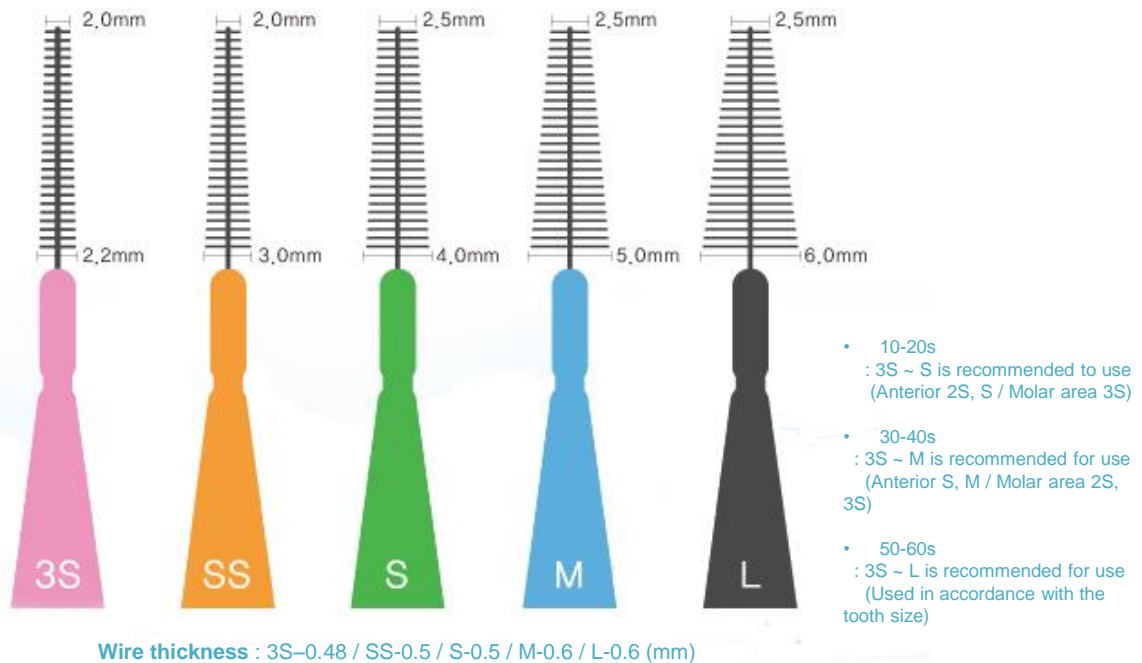

Convenience

- Single toothpaste-coated toothbrush as sealed without the need for a separate case is OK.
- Toothpaste is coated to be available just after opening.
- After using, the toothbrush bristles can change from blue to white, so you can easily know whether to use further or not.
- Always available when required without the need to use water regardless of timing and place.

Product Information

Interdental toothbrushes

Size (unit: mm) (wire diameter, front diameter, rear diameter)

How to select interdental brush size

The size of interdental brushes must be purchased to fit the size of the gap, the space between the teeth. If the size is too small, food waste doesn't get washed away and if it is too large, it can be further apart the space between the teeth. Interdental toothbrush consists of various sizes, so please select the brush to fit into the gap, the space between the teeth.

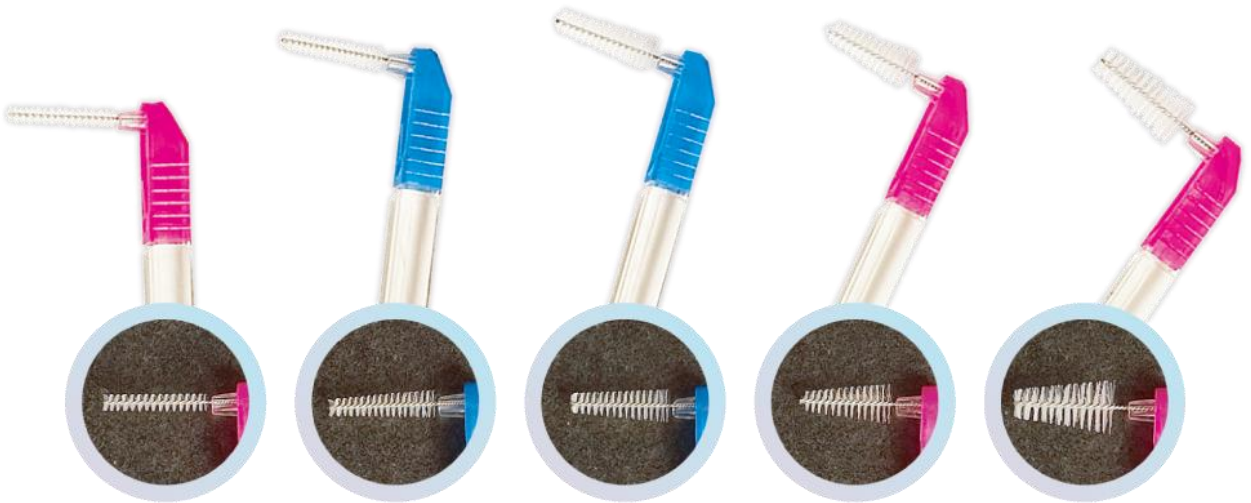

Recommended to those who are in the following situation:

- Those who are in severe halitosis (bad breath)
- Those who frequently use a toothpick
- Those who have a big gap between the teeth
- Those who are being corrected or with prosthesis
- Those who wish to prevent dental caries (tooth decay) and gum disease
- Those who can't frequently brush after meals or often have food waste in between teeth

Product Information

Dental floss

Dental floss helps to effectively remove food waste and plaque between the teeth and in the gum line out of the reach when brushing.

특 허 번 호 : 제 10-0772981호
실용신안번호 : 제 0387237호

How to use dental floss

1

If you use the dental floss in the entire teeth, cut approximately 40-50cm of floss and then wind until the distance between the floss and the middle finger on both hands becomes 5-10cm.

2

When inserting the floss between the teeth to make about 2-3cm in practical applications using your thumb and forefinger, do it just like sawing and when wiping, do it like strumming in the chewing surface direction with a wrap on one tooth.

3

If you are not familiar with flossing, please pay attention to when you insert the floss between the teeth because the gums may get hurt if you push too hard.
